1. FRAMEWORK

The certification framework "EarthCheck Destination" presents as one of its requirements the preparation of a risk analysis, in which: "The destination must identify the current and/or potential level of risk of situations, planned, accidental or emergency, natural or anthropogenic, related to the scope of action of the destination".

This risk assessment should include the following areas of performance:

- 1. Energy efficiency, conservation, and management
- 2. Greenhouse gas emissions
- 3. Air quality protection and noise control
- 4. Management of freshwater resources
- 5. Waste water management, drainage and streams
- 6. Ecosystem conservation and management
- 7. Land use planning and development
- 8. Transport
- 9. Solid Waste Management
- 10. Management of environmentally harmful substances
- 11. Cultural and Social Management
- 12. Economic Management

Therefore, this risk assessment for the Destination Azores is presented below, considering the previous assumptions.

| Risk asse | ssment | Elaboration: Azores DMO | Approval: Carolina Mendonça | Page |
|-----------|------------------------------|-------------------------|-------------------------------|------|
| Rev: 01 | Code: EC09_01RiskAssessement | Created: 08/13/2021 | Ref. Earthckeck Standard: 5.2 | 3 |

2. METHODOLOGY

The scope of the current report extends to:

- a) Risk: effect of uncertainty on the results of the activities developed or with influence on the region in environmental, cultural, social and economic terms;
- b) Aspect: present features with its interaction generating a potential impact on the environment, the social and cultural activities or the economy of the Region;
- c) Impact: variation (positive or negative) in the resulting environment, totally or partially caused by the influence of the aspects.

To evaluate the risks, we deployed the following methodology:

The risk assessment was carried out, considering two dimensions:

- The likelihood,
- The severity.

Tables 1 and 2 present the various likelihood and severity categories that were used in this risk analysis.

Table 1 - Definition of Likelihood Degrees

| Category | Definition |
|----------|---|
| 1 | Certain/happens daily: Impact is expected with a daily frequency. |
| 2 | Likely/happens weekly: Impact is expected in most cases. |
| 3 | Possible/happens monthly: The impact is expected on a monthly basis. |
| 4 | Unlikely/happens annually: Impact may occur, but not much to be expected. It can occur annually. |
| 5 | Rare: Impact only occurs in exceptional situations. |

| Risk assessment | | Elaboration: Azores DMO | Approval: Carolina Mendonça | Page |
|-----------------|------------------------------|-------------------------|-------------------------------|------|
| Rev: 01 | Code: EC09_01RiskAssessement | Created: 08/13/2021 | Ref. Earthckeck Standard: 5.2 | 4 |

Table 2 - Definition of Severity Degrees

| Category | Definition |
|----------|--|
| 1 | Catastrophic : Widespread and irreparable damage in terms of environmental, cultural, social or economic dimensions; loss of human life or harmful and permanent effects on people's health; national emergency situation. |
| 2 | Larger : Generalized damage, with medium- or long-term impact; serious damage to people's health; regional emergency situation; situation of violation of legal requirements, major disruption in current operations; Region's reputation at stake |
| 3 | Medium: Medium or long term impact in a limited area; moderate contribution to global warming; moderate health effects requiring medical care; monitoring by the regional media; violation of legal requirements with application of fines. |
| 4 | Smaller: Short- or medium-term impact on a limited area; reduced contribution to global warming; minor and reversible damage to the health of people in need of first aid; negative impact on regional media; occasional situations of violation of legal requirements. |
| 5 | Impact limited to a given area with no long-term effects; concern or complaints in the neighborhood; no impact on people's health; without violation of legal requirements, with some situations of technical non-compliance. |

From the combination of the categories identified above, a double entry table is built for the final valuation of risk, as shown below.

| | | | S | EVERIT | Ϋ́ | |
|------------|---|---|----|--------|----|----|
| | | 1 | 2 | 3 | 4 | 5 |
| | 1 | 1 | 2 | 3 | 4 | 5 |

| ASPECT | POTENTIAL IMPACT(S) | LIKELIHOOD | SEVERITY | RISK | RISK MINIMISATION | | |
|--|--|------------|----------|------|--|--|--|
| Water Management and its resources | | | | | | | |
| Area of land use occupation of the agricultural sector. | Pollution of surface and underground water. Potential negative image of the Region for residents and tourists. | 4 | 4 | 16 | Delimitation of aquifer and surface water protection areas. Sensitization of primary producers to the negative effects, on water resources, of their activity, as well as the respective rules of conduct. Promotion of sustainable practices in the agricultural sector. | | |
| Greater pressure on water resources in the summer months. | Lack of availability of the resource on some islands, and for some activities (e.g., agriculture). | 4 | 4 | 16 | Integrated management of water supply networks. Increased water storage capacity. | | |
| Pollution resulting from the activity of the American Base in Lajes. | Inorganic aquifer pollution. | 5 | 2 | 10 | Ongoing negotiation with US authorities to take the necessary measures to mitigate the problems. | | |
| Possible increase in water consumption and of waste in supply systems. | Reduction in the availability of the resource for consumption and the possibility of exceeding the capacity limits for renewing sheets \ water sources available for collection. | 3 | 4 | 12 | Frequent inspection of water collection and transport circuits. Awareness of controlled consumption and reduction of water waste. Creation of more rainwater catchment reservoirs for the agricultural sector. | | |

| ASPECT | POTENTIAL IMPACT(S) | LIKELIHOOD | SEVERITY | RISK | RISK MINIMISATION |
|---|--|------------|----------|------|---|
| Wastewater management | | | | | |
| Lacking connection to existing public wastewater sanitation systems. | Pollution of surface and groundwater (including those for human consumption), with potential pathogenic bacteria, and soil pollution. | 5 | 4 | 20 | Promote connection to public sanitation systems, whenever possible. |
| Ecosystem management and | conservation | | | | |
| Increased tourist pressure on natural areas, | Pressure on the ecosystem with possible repercussions on its biodiversity. Potential negative image of the Region for residents and tourists. | 3 | 4 | 12 | Measures provided that foreseen the legal and regulatory instruments relating to tourism planning in the Region. Measures to encourage the d decentralization of the visitors' experience to the archipelago and lesser-known attractions. |
| Increase in the number of recreational boats in marinas in the Region and cruise ships. | Spills with consequent pollution of the marine ecosystem. Introduction of marine invasive alien species. | 5 | 3 | 15 | Mechanisms and equipment for controlling spills at sea. Avoid the risk of biological invasions, by ballast water, through the implementation of the Diploma of Biodiversity regulations and the norms of the International Maritime Organization (norms) |
| Increased agroforestry and urban pressure on natural ecosystems. | Changes on the ecosystem. | 4 | 4 | 16 | Legislation and territorial management instruments. |

| ASPECT | POTENTIAL IMPACT(S) | LIKELIHOOD | SEVERITY | RISK | RISK MINIMISATION |
|---|---|------------|----------|------|--|
| Ecosystem management and co | onservation | | | | |
| Rural fires. | Changes on the ecosystem Destruction of biodiversity Waste. Impact on people's lives (social and economic). | 5 | 5 | 25 | Rural areas surveillance. Raising awareness about the use of fire to forest producers and farmers. |
| Management and use of the te | rritory | | | | |
| Anthropogenic pressures (agriculture, tourism, and urbanization) on the territory. | Potential negative image of the Region for residents and tourists. Potential consequences of natural disasters. Degradation of landscape quality. | 3 | 4 | 12 | Implementation of Territorial Management Instruments (PNOPT, PROTA, POTRAA, Sectoral Plans, Special Spatial Planning Plans, PMOT). Regulated and controlled licensing. Carrying out economic feasibility analyzes and environmental impact studies for public and private investments included. |
| Transport | | | | | |
| Increase in the number of visitors in the region, with a consequent increase in the volume of land transport (occasional), namely with cruise ship travelers, and trips on rent a car. | Atmospheric pollution. Increased noise levels. Increased traffic volume. | 3 | 3 | 9 | Land traffic control. Cruise ships in counter cycle. Implementation of carrying capacities defined in POTRAA. Tax and financial incentives for the conversion of terrestrial tourist fleets to hybrid/electric vehicles. Encouraging the implementation of decarbonization actions. |

4. RESPONSE TO EMERGENCY SITUATIONS

The Azores Regional Civil Protection and Fire Service (SRPCBA) is the department that reports to the Regional Secretariat for Health and Sports and is responsible for guiding, coordinating and supervising, at the level of the Autonomous Region of the Azores, Civil Protection and of the Fire Departments. It also, ensures the operation of a land transport system for medical emergencies, in order to guarantee, to casualties or victims of sudden illness, the prompt and correct provision of health care (https://www.prociv.azores.gov.pt).

They are civil protection agents, in accordance with their own attributions:

- 1. Fire brigades;
- 2. Security forces;
- 3. The Armed Forces;
- 4. The bodies of the National Maritime Authority;
- 5. The National Civil Aviation Authority;
- 6. Public entities providing health care.

The SRPCBA is organized in four divisions, each with the following competencies:

 Prevention, Training and Awareness who are responsible, among other competences for promoting, ensuring, and supporting prevention/awareness in Civil Protection among all citizens; ensure the training of elements of the fire brigades in the areas of pre-hospital emergency, fire, and rescue, planning and operations.

More information at:

https://www.prociv.azores.gov.pt/sensicao/

https://www.prociv.azores.gov.pt//formacao/

2. Planning, Operations and Risk Assessment, its mission is to ensure the planning and direction of the Service's operations, the coordination of the resources to be committed and the adequacy of exceptional measures to be adopted in the imminence or occurrence of a serious accident or catastrophe. This division also includes the Emergency Operations Center, the operational structure of the SRPCBA, which includes, among others, the Emergency Management and Service Room where all RAA distress calls are answered, sorted, and monitored. Ensures the service of the European

Emergency number (112), Medical Emergency Line and other emergency situations that directly or indirectly put the population at risk. More information at: https://www.prociv.azores.gov.pt/operacoes/ https://www.prociv.azores.gov.pt//emergencia-medica/

3. Fire Department Inspection, in addition to the competences assigned to it through the Azores Regional Civil Protection and Fire Service, its main objective is to ensure the technical and operational connection between the government and all Fire Departments in the Region, maximizing investment and the dedication, professionalism and competence of the Firefighters, ensuring their recognition and safety in an active and permanent way.

More information at:

https://www.prociv.azores.gov.pt//firemen/

 Fire safety, this division's main competence is to ensure compliance with fire safety regulations in buildings in the Azores.
 More information at:

https://www.prociv.azores.gov.pt/seguranca/

The SRPCBA has a Training Center which is a space for training and theoretical/practical training, with approximately 5 hectares and comprising a diverse set of infrastructures that allow the practical training of Fire Brigade operatives, in a wide range of representative scenarios presenting the reality in the Autonomous Region of the Azores and allowing the training and education of operational and collaborators from other regional entities. This training center has specialized technical training, in terms of pre-hospital emergency, structural firefighting, industrial firefighting, intervention in road rescue and extrication, height rescue in confined spaces and catastrophe intervention.

5. Hospital Assistance

In the Autonomous Region of the Azores, there are the following hospital care equipment/infrastructures:

- Basic Emergency Units on all islands.
- IFS Service Immediate Life Support on four islands (São Miguel, Terceira, Faial and Pico).
- Emergency services in the three Hospitals of the RAA, on the three islands with the highest population density (São Miguel, Terceira and Faial).
- Inter-island and overseas emergency transport.
- Medical Emergency Line.
- Azores Health Line.

6. Pandemic by COVID-19

The Government of the Azores activated all the resources to respond to the public emergency imposed by the evolution of the COVID-19 pandemic. The responses were – and will continue to be – agreed upon between the Regional Health and Sports Secretariat, through the Regional Health Directorate, and the guidelines issued by the General Directorate of Health and the World Health Organization.

All the guiding information regarding the COVID-19 pandemic (eg, normative and informative circulars) - in addition to being published in the Official Journal of the Regional Government of the Azores - are also disseminated through the main regional information channels, as well as through social and on the website created exclusively to gather information on the evolution of the pandemic and the Region responses. "Safety Destination Azores" website -<u>https://destinoseguro.azores.gov.pt/</u> - aggregates all the information regarding the pandemic, from the evolution of active cases, recoveries, deaths and the vaccination process, as well as the measures prevailing per island to mitigate the spread of the virus in the community.

The Government of the Azores, through the Regional Directorate of Tourism, promotes a set of measures aimed to mitigate the native impact and promote the recovery of the sector, namely:

- Plan "Relatival o Turismo" Reactive Tourism activity;
- Clean&Safe Azores stamp (https://clean-safe.azores.gov.pt/);
- Safe destination voucher (http://voucher.azores.gov.pt/pt-pt/);
- Azores Air Fare at €60 (https://www.azoresairlines.pt/pt-pt/informacao/tarifa-acores);

 Measures to support companies and restaurants (https://portal.azores.gov.pt/web/draic/apoioscovid19).

(#

The Clean&Safe Azores project, which within its scope developed specific guidelines for various sectors of activity in the tourism value chain, to mitigate the danger and propagation situations associated with COVID-19, to implement more effective prevention measures and behaviors and train agents on the procedures to be taken in confirmed cases of COVID-19 with their clients.

This project, created in 2020 and renewed in 2021, thus aims to recognize the commitment of private tourism agents in complying with the security measures in relation to COVID-19 and, at the same time, encourage tourists to trust to travel to the Azores, through an internationally recognized validation mechanism for these measures.

This is a voluntary application process for agents, which requires – for the award of the stamp – the (mandatory) participation in a training session dedicated to the specific measures of their sector of activity. Upon completion of the training, all companies send their Contingency Plan and Declaration of Honor on how to apply Clean&Safe Azores measures to the Regional Directorate of Tourism. The Clean&Safe Azores Stamp is issued with 1-year validity, with a yearly renewal. During the validity period of the stamp, validations of compliance with the measures are carried out by the Regional Tourism Inspectorate: non-compliance implies the loss of the stamp.

ANNEX

Analysis of the risks according to the Regional Civil Defence Emergency Plan of the Azores approved by the Government Resolution no. 55/2019 of 16 April 2019

I SERIES

TUESDAY 16TH APRIL 2019

3. TYPES OF RISKS

No 46

This current plan seeks to provides responses to risks with the potential to impact on the Autonomous Region of the Azores.

The risks considered are the following:

| | Earthquakes | | | | |
|------------------------|--|--|--|--|--|
| | Volcanic Activities | | | | |
| | Flooding | | | | |
| | Coastal Flooding | | | | |
| Natural Risks | Landslides | | | | |
| | Cyclones, Storms and Hurricanes | | | | |
| | Coastal Erosion | | | | |
| | Tsunamis | | | | |
| | Collapse of natural subterranean caves | | | | |
| | Maritime Accidents | | | | |
| | Air Accidents | | | | |
| Technological Risks | Overland transport of dangerous goods | | | | |
| Nisks | Industrial Accidents | | | | |
| | Urban Fires | | | | |
| M: 15:1 | Pollution Accidents | | | | |
| Mixed Risks | Forest Fires | | | | |

The risk evaluation took into consideration the probability of occurrence and the gravity.

The probability of occurrence is defined according to the historical incidence of the risk under analysis and the likelihood of such risk is high, medium-high, medium, medium-low and low.

In relation to certain risks, especially the technology based risks, no level is attributed due to the only residual probability of occurrence.

| LEVEL OF PROBABILITY | ANNUAL PROBABILITY | PERIOD OF RETURN (YEARS) |
|-------------------------|-----------------------|-----------------------------|
| High | >= 0.2 | <=5 |
| Medium-high | 0.05 - 0.2 |]5 - 20] |
| Medium | 0.02 - 0.05 |]20 - 50] |
| Medium-low | 0.005 a 0.02 |]50 - 200] |
| Low | < 0.005 | >200 |

PRESIDÊNCIA DO GOVERNO REGIONAL DOS AZORES GABINETE DE EDIÇÃO DO JORNAL OFICIAL HTTP://JO.AZORES.GOV.PT

I SÉRIE

Nº 46

TERÇA-FEIRA, 16 DE ABRIL DE 2019

In order to ascertain the level of gravity, this considers the historical incidence of occurrences, the events with the greatest probability and most severe occurrences, defining the expected damage caused to the population, the environment, the economy and society, with the level of gravity classified as residual, reduced, moderate, high or critical.

| GRAVITY | IMPACT | DESCRIPTION |
|----------|---------------|---|
| RESIDUAL | Population | There are no injuries or mortalities. There are no evacuations of people or only of limited numbers for short periods (up to 12 hours). Few support staff necessary. Insignificant levels of damage. |
| | Environment | There is no environmental impact. |
| | Socioeconomic | There is no or only levels of impact on the community. There are no financial losses. |
| REDUCED | Population | Small number of injuries without any fatalities. Some hospitalisations. Evacuation of people for periods less than 24 hours. Some support and reinforcement staff needed. Some damage. |
| | Environment | Low level environmental impact without long lasting effects. |
| | Socioeconomic | Disruption (less than 24 hours). Low level financial losses. |
| MODERATE | Population | Moderate number of victims. Medical treatment necessary but without fatalities. |

PRESIDÊNCIA DO GOVERNO REGIONAL DOS AZORES GABINETE DE EDIÇÃO DO JORNAL OFICIAL HTTP://JO.AZORES.GOV.PT GEJO@AZORES.GOV.PT

|-------------------|---------------|---|
| JO | I SÉRIE № 46 | TERÇA-FEIRA, 16 DE ABRIL DE 2019 |
| JORNAL OFICIAL | | |
| | | Some hospitalisations. |
| | | Evacuation of people for a period of 24 |
| | | hours. |
| | | Some technical staff necessary. |
| | Environment | Environmental impact without long lasting effects. |
| | | Some disruption to the community (less |
| | Socioeconomic | than 48 hours). |
| | | Some financial losses. |
| | | Large numbers of victims. |
| | | High numbers evacuated for periods in |
| | | excess of 24 hours. |
| | | Fatalities. |
| | Population | External resources required to support |
| | | emergency teams. |
| HIGH | | Significant damage that require external resources. |
| | Environment | Some environmental impacts with long lasting effects. |
| | | Partial functioning of the community with |
| | Socioeconomic | some services unavailable. |
| | | Significant losses. |
| | | High numbers of victims. Large scale |
| | | evacuations for long term durations. |
| | Population | Significant numbers of fatalities. |
| CRITICAL | | Support staff and reinforcements necessary. |
| | | Significance environmental impact with |
| | Environment | permanent damage. |
| | | The community is no longer able to |
| | Socioeconomic | function without significant support. |
| | | |

CADTION.

This attributes both a level of risk in accordance with the respective levels of probability and gravity as set out in the risk matrix below:

NOTE: while the Azores has no experience of Forest Fires, which would result in their inclusion in the table above, they need to be considered a potential risk deserving particular attention due to the ongoing effects of climate change.

| Maximum daily wind gusts | Daily Precipitation (mm): |
|--------------------------|--|
| (km/h): | R1: 99-134 |
| G1: 127-145 | R2: 135-165 |
| G2:146- 161 | R3: 166-201 |
| G3: 162-179 | R4: 202-237 |
| G4: 180-198 | R5:>= 238 |
| G5:>= 199 | |
| | |
| | Maximum daily wind gusts (km/h): G1: 127-145 G2:146- 161 G3: 162-179 G4: 180-198 G5:>= 199 |

| Risk Asse | essment | Elaboration: Azores DMO | Approval: Carolina Mendonça | Page |
|-----------|------------------------------|-------------------------|-------------------------------|------|
| Rev: 01 | Code: EC09_01RiskAssessement | Created: 08/13/2021 | Ref. Earthckeck Standard: 5.2 | 28 |

In order to characterise the natural risks, specifically earthquakes, landslides, remote tsunamis, regional tsunamis, local tsunamis, pyroclastic falls, pyroclastic flows, lava flows, volcanic gases, constant gas emissions and flooding, we opted to carry out analysis for each island taking into account the different geological, geodynamic and geomorphologic contexts as any other approach at the regional level would remain overly generalist in detail. Hence, we set out the following risk matrixes:

| SANTA MARIA | | LEVEL OF GRAVITY | | | | |
|----------------|-----------------|----------------------|------------|----------|-------------------------------------|----------|
| | | Residual | Reduced | Moderate | High | Critical |
| · >- | High | | | | | |
